Xynthia.2

MERISH5 RUNS THANKS TO ITS XYNTHIA OPERATING SYSTEM CREATED BY M-LIVE. OVER THE PAST 12 MONTHS, WE HAVE GATHERED ALL THE INFORMATION AND ADVICE THAT THOUSANDS OF MERISH5 USERS HAVE SENT US AND HAVE DECIDED TO UPGRADE THE MACHINE. THUS, XYNTHIA2 WAS BORN.

XYNTHIA2 IS AVAILABLE FOR BOTH MERISH5 AND MERISH5+ PLUS. IN THIS SHORT DOCUMENT, YOU WILL FIND THE INFORMATION AND NEW INSTRUCTIONS FOR USE FOR THE PARTS THAT HAVE UNDERGONE THE MOST SIGNIFICANT CHANGES.

Enjoy the read and have fun!

INSTALLATION OF XYNTHIA2

Here is how to upgrade Merish5 to Xynthia2. We suggest dividing the upgrade into two parts: function upgrading (points 1-8) and sound upgrading (points 9 - 10):

- If you have not yet registered: go to www.songservice.it (www.song-service.com / www.song-service.de) and open an account. The account will be used to manage the download of Songs in Midi, Mp3, Video and MTA formats. In addition, you can manage plug-ins and operating system updates).
- 2. If it has yet to be done:

login from Merish5 to www.songservice.it. To log in:

- a. Switch on Merish5 with the M-Pen inserted
- b. Access an active Wi-Fi network (see manual)
- c. Click WEB > Account
- d. Enter e-mail and password in the dedicated fields
- 3. Update Merish5 to version 2.0, which is available online.

Proceed as follows:

- a. Go to Option > Utilities > Software update
- b. Complete the update to Version 2.0
- Go to www.songservice.it/xynthia2 (select your language on the top right) to purchase XYNTHIA2.

- 5. After purchasing the Xynthia2 package, switch the Merish5 off and on, connecting it to the Internet via the M-Pen.
- 6. A box appears: The Xynthia2 update was successful. Press the RESTART button
- 7. Press Restart
- 8. At this point, Merish5 is upgraded to Xynthia2 in terms of functions.
- 9. SOUND UPDATE: the procedure is rather long (about 3 hours) and we suggest doing it when you have adequate time available.
- 10. To update sounds: go to Option > Utilities > Sounds update. Wait for the update to finish.
- 11.Restart Merish5

If the update is interrupted for any reason, it can be resumed from the beginning without any problems.

"SONGS" MENU

This is what the new archive navigation bar looks like:

Searching for Music Tracks can be done in different ways by selecting the specific button:

- 1. "Titles" the search that is launched explores the entire Merish5 archive. The title is searched in the entire archive, i.e. within all folders.
- 2. "Artists" the search that is launched explores the entire Merish5 archive. The artist is searched throughout the archive, i.e. within all folders.
- 3. "Genres" the search that is launched explores the entire Merish5 archive. The music genre is searched throughout the archive, i.e. within all folders.
- 4. "Browse Folder" the search that is launched only explores the folder we are in. The name of the folder is indicated at the top of the "Songs" screen.

ALPHABETICAL SEARCH (WITH THE "AA" BUTTON)

This icon appears at the top of the SONGS window:

Tapping it opens the Alphabetical Search:

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

The button on the left (1#!) opens the list of numbers and symbols. To the right are the letters of the alphabet with which you can find titles (or artists, or music genres) depending on the first letter. If, for example, you tap Titles - Aa and the letter "L", you will open a list of all the songs on Merish5 sorted alphabetically starting with the letter L.

If you want to search for a "Titolo" and you do not know in which folder it is located:

- 1. Enter the SONGS window
- 2. Tap "Titles"

- 3. Click the "Aa" button to point to the first letter of the title: e.g. "L" for La Bamba. In this way, a quick search is performed by pointing to the initial letter. To write the full title, a search must be performed via Search, as explained in the following section.
- 4. Merish5 shows a list sorted alphabetically starting with the letter "L".
- 5. The following screen appears:

From this screen, you can scroll through the list (Alpha Dial or Up - Down) of songs found during the search (the list starts with those beginning with the letter "L"). Please note: the list is not a filter, but is the complete list of all songs on Merish5 starting with the letter L, the list can be scrolled forwards and backwards. From here we can select, play, place in quick list, perform a Go To. place the selected song in the Next Song position.

ICON:

By tapping on the right of the title, the icon representing the Directory with the Arrow takes you directly to the folder containing the title found. This way, if we do not know which folder that song belongs to, we can reach it with a simple tap.

Navigation of the Song Service site is excluded from this search mode.

Similarly, we can search by filtering by Artist (repeat the procedure by tapping the ARTISTS button in step 1) or by Musical Genre (repeat the procedure by tapping the GENRES button in step 1).

If we filter with the BROWSE FOLDER button, the search (always only by Title) takes place in the directory we are browsing, excluding the contents of any subdirectories.

USB STICK SEARCH

With Xynthia2, it is also possible to search on USB devices, e.g. sticks or hard disks connected to Merish. The search will only be related to the "filename", i.e. what the file you are searching for is called, as it is not possible to write the data and genre of music to archives outside Merish5. The search on an external device takes place on the selected directory and all subdirectories of the same directory.

Depending on the number of files stored on the device, there may be a slowdown compared to the normal search speed that Merish5 reaches for internal archives, which are optimised at the database level.

MTA 8 (ON MERISH5)

Xhyntia2 allows Merish5 users to read and play MTA 8 files. MTA is a proprietary M-Live format that plays a backing track in a Multitrack Audio format.

The Audio format guarantees a higher audio quality, and the fact that it is multi-track allows for editing operations on the arrangement: volume can be changed, tracks that make up the base can be muted or soloed. In addition, the Audio multitrack includes the Melody track and the Click track, which is essential for keeping in time with the backing track. This is not possible, for example, on a stereo Mp3 base track.

The MTA format is now provided in two versions: MTA 16, which has 16 stereo tracks and is read by Merish5+ PLUS, and MTA 8, which has 8 stereo tracks (including clicks and melody) and is also read by Merish5 without any hardware modification, just by activating XYNTHIA2. The tracks will be organised as follows:

- 1 DRUMS
- 2 BASS
- 3 GUITAR

- 4 KEYBOARD
- 5 ORCHESTRA
- 6 WINDS
- 7 Melody (button management)
- 8 Click (goes out in the dedicated channel)

Tracks are then controlled by Merish5's Mixer, and by the direct buttons on the front panel: pressing the button once will mute the track, pressing it twice quickly will put it in SOLO. Pressing the physical MIXER button will display the sliders for the 6 tracks. The handling is quite similar to that of a Midi File.

For those with XYNTHIA2, it will be possible to purchase MTA files at www.songservice.it. The same files will be loaded automatically in MTA 8 or MTA 16 depending on the Merish5 you own.

PLEASE NOTE: the GO TO function when using MTA 8 files on Merish5 does not have the same modality as for Midi and stereo Mp3 files. Loading audio tracks does not allow the same functionality as direct "Go to". "Go to" between two MTA 8s always occurs with a Fade Out and Fade In between the two files.

WI-FI NETWORK CREATION BY MERISH5

With Xynthia2 it is possible to generate a Wi-Fi network, if the space where you work is not equipped with one.

This will be especially useful when you want to use the Prompter App and when you do not have an adequate telephone or Wi-Fi network in the room where you are playing.

To activate a Wi Fi network from Merish5:

- 1. Placing the M-Pen on Merish5
- 2. Go to Options > Network
- 3. Tap "Generate the networks", answer YES on the next screen.
- 4. The following screen opens:

From this screen we can access the network generated by Merish5. In fact, we can read its name and Password. The default password is 12345678 but can be changed by pressing EDIT.

If you scan the QR code with a smart device, you will have immediate access to the private network.

LYRICS AND CHORD EDITING

Lyrics and chord editing on Xynthia2 has been modified, both for the writing and synchronisation part. Let's see how.

Lyrics editing

Here is the new Lyrics Edit screen:

At the bottom we find:

Selection: The row in the middle between the yellow rows is the chosen row; by pressing ENTER you will select it. More than one row can be selected by moving the cursor to another row and pressing ENTER.

Import TXT to import a lyrics file for synchronisation. We suggest lyrics lines within 40 characters.

Insert row: inserts an empty row in the lyrics. Press this button and write lyrics with the alphanumeric keypad or a USB keyboard. The row is inserted after the selected one.

Edit: opens a window to edit the selected row of lyrics.

Syllable: shows the division of the lyrics into syllables. This will be useful when we are going to colour the lyrics to be synchronised to the music per syllable. To select the syllable language, scroll down the drop-down menu and choose from the 5 available languages: Italian, English, German, Spanish, French. It is possible to modify the proposed syllables by pressing the edit button and using the ^ character as syllable separator.

Erase Everything: delete all lyrics. To delete a part of lyrics: select rows with the enter button > press DEL, in the lower right-hand corner of the display. The selection will be deleted.

Copy: copies the selected elements.

Paste: pastes the selected and copied elements. Copying takes place after the selected row.

Lyrics synchronisation

Once the lyrics are correctly written, you can switch to Synchronise by tapping "Synchronise lyrics". The following screen appears:

Horizontal dashes appear to the left of the lyrics when they are not synchronised.

Lyrics synchronisation can take place in different ways:

Synchronise by colouring lyrics with your finger

If you want to make this operation easier, remember that you can slow down the execution of the backing track with the Speed +/- buttons. This will be useful when synchronising.

If the lyrics are written correctly, START is pressed to start the backing track; the screen is to be tapped with the index finger on the vertical point where the row of lyrics begins. Please note: in order not to cover the lyrics, you can also tap below the row, so it will remain readable while synchronising the lyrics.

When you press stop, the synchronised rows will be completed. If we want to re-synchronise a portion of the song, we can select the rows (point to the row and press

Enter) and press Clear Synch or press Start. The selected rows will automatically be ready to be synchronised again. Pressing Start places the player in the previous row and we are ready to perform a new synchronisation.

WARNING: when synchronising a song in several steps, small mistakes can be made. For example, some rows may have non-consecutive synchronisation, because, for example, subsequent synchronisations have been made. In this case, lyrics rows that are not correctly synchronised will be marked in red. When exiting the function, the software signals with a message that there are SYNCHRONISATION ERRORS. This does not affect the execution of the backing track, but there may be errors in the display of the lyrics.

Synchronisation by row [Sync. Row]

If you want to make this operation easier, remember that you can slow down the execution of the backing track with the Speed +/- buttons. This will be useful when synchronising.

The lyrics can be synchronised per row if there is no need for "syllable" synchronisation.

If the lyrics are written correctly, START is pressed to begin the backing track, touching the SYNC button. ROW the selected row is synchronised at the precise execution point. Thus, synchronisation can be continued.

When you press stop, the synchronised rows will be completed. If we want to re-synchronise a portion of the song, we can select the rows (point to the row and press Enter) and press Clear Synch or press Start. The selected lyrics rows will automatically be ready to be synchronised again. Pressing Start places the player in the previous row and we are ready to perform a new synchronisation.

WARNING: when synchronising a song in several steps, small mistakes can be made. For example, some rows may have non-consecutive synchronisation, because, for example, subsequent synchronisations have been made. In this case, lyrics rows that are not correctly synchronised will be marked in red. When exiting the function, the software signals with a message that there are SYNCHRONISATION ERRORS. This does not affect the execution of the backing track, but there may be errors in the display of the lyrics.

Synchronisation by Word [Sync. word]

Lyrics can be synchronised by Word. If you want to make this operation easier, remember that you can slow down the execution of the backing track with the Speed +/-buttons. This will be useful when synchronising.

If the lyrics are written correctly, START is pressed to begin the backing track, touching the SYNC button. WORD the selected row is synchronised word by word, at the precise execution point. Thus, synchronisation can be continued.

When you press stop, the synchronised rows will be completed. If we want to re-synchronise a portion of the song, we can select the rows (point to the row and press Enter) and press Clear Synch or press Start. The selected lyrics rows will automatically be ready to be synchronised again using any method. Pressing Start places the player in the previous row and we are ready to perform a new synchronisation.

WARNING: when synchronising a song in several steps, small mistakes can be made. For example, some rows may have non-consecutive synchronisation, because, for example, subsequent synchronisations have been made. In this case, lyrics rows that are not correctly synchronised will be marked in red. When exiting the function, the software signals with a message that there are SYNCHRONISATION ERRORS. This does not affect the execution of the backing track, but there may be errors in the display of the lyrics.

Synchronisation by Syllable [Sync. Syllable]

If you want to make this operation easier, remember that you can slow down the execution of the backing track with the Speed +/- buttons. This will be useful when synchronising.

The lyrics can be synchronised by Syllable if they have been written correctly and if the "syllable" function in the Edit part of the lyrics has been activated. In this way, the lyrics will be divided by syllables, but this function is active for lyrics in five languages: Italian, English, French, German and Spanish.

If the lyrics are written and spelled correctly, START is pressed to start the backing track, touching the SYNC button. SYLLABLE the selected row is synchronised syllable by syllable, at the precise execution point. Thus, synchronisation can be continued.

When you press stop, the synchronised rows will be completed. If we want to re-synchronise a portion of the song, we can select the rows (point to the row and press Enter) and press Clear Synch or press Start. The selected lyrics rows will automatically be ready to be synchronised again using any method. Pressing Start places the player in the previous row and we are ready to perform a new synchronisation.

WARNING: when synchronising a song in several steps, small mistakes can be made. For example, some rows may have non-consecutive synchronisation, because,

for example, subsequent synchronisations have been made. In this case, lyrics rows that are not correctly synchronised will be marked in red. When exiting the function, the software signals with a message that there are SYNCHRONISATION ERRORS. This does not affect the execution of the backing track, but there may be errors in the display of the lyrics.

Edit Chords

Here is the Edit Chords screen:

Language drop-down menu: select chord language. Insert Chord: writes a new chord in the list and inserts it into the song.

Replace: allows you to replace one of the chords in the list, leaving its Synch position unchanged. Point to the chord in the left-hand list > tap replace > select the new chord in the chord entry window. The chord will replace the targeted one.

Keyboard: activate chord recognition from Keyboard

Erase Everything: Delete the complete list of chords written on the backing track

Copy: copies the selection (select by pressing enter on one or more chords)

Paste: paste selected and copied chords

B-flat / sharp: plays keyboard chords with sharp or B-flat in key.

Synchronise chord: opens the chord synchronisation window.

Writing and synchronising chords on Merish5 with Xynthia2 can be done in two ways: the simplest is to use a Midi keyboard connected via USB to Merish5. In this way it will be sufficient to play the chord and Merish5 will write it correctly and in the right place. Writing and synchronisation will be completed in one go.

Writing chords with the Midi keyboard

Connect a Midi keyboard to Merish5 using the USB input. The midi keyboard can be used to write chords at the precise location in the backing track.

Tap the Keyboard button to activate Keyboard chord recognition.

Position the Song from the beginning, or the point at which you want to write a chord.

Play the chord, taking care to play over the C3 button on the keyboard the part of the chord (e.g. D, F, A to write Dm). The left hand will be used to indicate a possible inversion, in keys B2 to the left, e.g. F2 to write Dm/F.

Pressing Play and Stop on the Merish panel allows you to continue or pause chord writing.

If you want to make this operation easier, remember that you can slow down the execution of the backing track with the Speed +/- buttons. This will be useful when synchronising.

If you know a piece of music well, it will be easy to write down all the chords from beginning to end. Conversely, chords can be interrupted at the desired points, or parts can be resumed at will.

CAUTION: To select whether chords are written in B flat or sharp in key, select the relevant symbol on the Merish display. Writing chords in manual method

From the Edit Chord screen, chords can be written by hand, proceed as follows:

- 1 Write down all the chords of the song by hand, as follows
- 2 Tap the "+" keys to write a chord.
- 3 Choose the root note and press enter, choose the chord type or variation and press enter, choose the bass note (if any) and press enter
- 4 The chord is written on the right-hand side of the screen.

Chord window: on the left is the column with the root notes. On the right there are three columns with the Variations and on the right the column with the Bass. All chords can be written with this table.

| Do | М | 7sus4 | M7(#9) | <none></none> |
|------|---------|--------|--------|---------------|
| Do# | m | 2 | add9 | /Do |
| Reb | 5 | sus2 | madd9 | /Do# |
| Re | (b5) | sus4 | 9sus4 | /Reb |
| Re# | 7 | 6 | 11 | /Re |
| Mib | M7 | 6/9 | m11 | /Re# |
| Mi | m7 | m6 | M11 | /Mib |
| Fa | mM7 | m6/9 | add11 | /Mi |
| Fa# | 7(b5) | 9 | madd11 | /Fa |
| Solb | m7(b5) | 7(b9) | 13 | /Fa# |
| Sol | M7(b5) | 7(#9) | m13 | /Solb |
| Sol# | mM7(b5) | m9 | M13 | /Sol |
| Lab | 7aug | m7(b9) | add13 | /Sol# |
| La | m7aug | m7(#9) | madd13 | /Lab |
| La# | M7aug | M9 | aug | /La |
| Sib | dim7 | M7(b9) | dim | /La# |

When you have finished writing all the chords in the backing track, you can move on to entering the chords and synchronising them to the music. To enter chords, tap the various chords in the order of the backing track. The chords will be written in sequence in the left-hand window. If the backing track is not in PLAY (Pause or Stop) the chords will not indicate a synchronisation point. Essentially, they are written in a table without timing.

To facilitate writing, the Select and Copy function can be used if there are repeated musical parts. You point to the chords to be duplicated and press enter to make a selection, press COPY, place the cursor at the destination point and click Paste.

To alternate between writing chords from Anglo-Saxon to Italian notation, tap the drop-down menu at the bottom left of the screen.

Synchronisation of Chords

Once the chords have been written correctly for the entire backing track, press Synchronise Chord.

From this screen, you press Start to begin the backing track, and press TAP to synchronise the selected and targeted chord.

When stop is pressed, the synchronised chords will be completed. If we want to re-synchronise a portion of the song, we can select the rows (point to the row and press Enter) and press Clear Synch or press Start. Selected chords will automatically be ready to be synchronised again. Pressing Start places the player in the previous chord and we are ready to perform a new synchronisation.

WARNING: when synchronising a song in several steps, small mistakes can be made. For example, some rows may have non-consecutive synchronisation, because, for example, subsequent synchronisations have been made. In this case, chord rows that are not correctly synchronised will be marked in red. When exiting the function, the software signals with a message that there are SYNCHRONISATION ERRORS. This does not affect the execution of the backing track, but there may be errors in the display of chords.

Cancel Selection: when certain chords are selected with this button they are deselected

Cancel Synch: cancels the synchronisation of the entire song.

Sync +/- increases or decreases the sync point with a range of 10 Ms. The function is active for the selected chord rows. Thus, it is possible to move the synchronisation of chords back or up globally if the "select all" function is activated.

MARKER SCREEN

A marker display has been added, which is called BOX, and can be selected from the Marker window and called up by the symbol:

on the main screen.

To view the Markers in BOX mode, tap on the Marker icon and select Box. After this selection, the markers appear as follows:

Markers are visible at the bottom of the screen, and remain displayed until the ESC button on the Merish panel is pressed or another function is selected.

From this screen you can choose a destination marker by tapping on it. Various functions described here can be selected at the bottom of the screen:

WIZARD: activates Wizard mode for the Go To. The wizard mode chooses the best way to switch from one marker to another.

X - FADE: activates transition with Cross Fade. Immediate: enables immediate switching between markers

Loop: activates Loop mode. The loop repeats the running Marker. It is deleted by tapping the button again.

List: returns to the traditional display with the list of markers.

MASTER KEYBOARD SCREEN

The Patch selection screen has been modified for easier access to favourite patches to be used on stage with the Master Keyboard.

The patches have been divided into 16 families. Tapping on the desired family takes you to a subsequent screen from which you can choose your preferred patch.

A function was added that allows a PATCH to be moved from a family to the USER PRESET;

It works like this:

- 1. Enter a Patch family
- 2. Select the Patch you want to copy into the User Preset family
- 3. Touch the "Copy To User preset" button

The patch will be copied into the USER family, which is the one available to the user. In this way, you can have your favourite patches in one family.

PEDAL: LYRICS SCROLL FUNCTION ADDED

A pedal functionality has been added that allows lyrics from a backing track to flow with the press of the pedal. In practice, it is possible to read the lyrics of the song without starting the backing track, and the page advance is managed with the foot pedal. In this way, Merish5 is used as a "music stand" for the lyrics, even when the backing track linked to the lyrics is not being played. The function is convenient when performing songs accompanied by a piano or other instrument.

To select it:

OPTION > Preferences > select "Single Press" and then "Text Scroll".

Thus, lyrics scrolling occurs after a single press of the pedal.

If, on the other hand, you want to use double pressure on the pedal (if you have another function assigned on the pedal as a single pressure), you select (again in Preferences) Double Press.

PLUG IN

In the Plug In section, a button was added for Xhyntia2. The screen that opens when tapping this button indicates whether Xynthia 2 is active or not.

Here is the screen that indicated the status of Xynthia2. Once the new operating system has been purchased from the Song Service site, tapping VERIFY PURCHASE will automatically activate Xynthia2.
